Customer Retention & Churn Analysis Report

1. Total Customers Analyzed: 7,032

2. Overall Churn Rate: 26.58%

3. Monthly Revenue at Risk (MRR Lost): ~$139,130

---

1. **High Contract Vulnerability:** Month-to-month contracts have the highest churn rate at ~42%, whereas one-year (~11%) and two-year (~3%) contracts show significantly lower attrition.

2. **Early Lifecycle Attrition:** The greatest customer drop-off occurs during the initial 0–12 months of tenure. Once customers surpass year one, retention improves substantially.

3. **Service Dependency:** Customers without technical support services exhibit churn rates exceeding 40%, indicating that unaddressed technical issues drive cancellations.

4. **Price Sensitivity:** Higher attrition is concentrated among customers with monthly charges in the $70–$100 range without bundled value-added services.

Actionable Recommendations:-

Incentivize Long-Term Contracts: Transition month-to-month subscribers into annual commitments by offering a 15% discount or one month of complimentary service upon signing a 1-year contract.

Launch a 90-Day Onboarding Program: Implement automated check-ins, product guides, and dedicated support for new users during their first 90 days to curb early drop-offs.

Bundle Value-Added Support Services: Provide complimentary Tech Support and Online Security for the first three months to high-risk customers, improving product stickiness and perceived value.

Targeted Retention Campaigns for High Spenders: Proactively offer loyalty perks or customized plan adjustments to subscribers paying over $70 per month before they reach cancellation intent.
